L. String Game

time limit per test: 2 seconds🔒
memory limit per test: 512 megabytes

Little Nastya has a hobby, she likes to remove some letters from word, to obtain another word. But it turns out to be pretty hard for her, because she is too young. Therefore, her brother Sergey always helps her.

Sergey gives Nastya the word t and wants to get the word p out of it. Nastya removes letters in a certain order (one after another, in this order strictly), which is specified by permutation of letters' indices of the word t : $a_1 \dots a_{|t|}$. We denote the length of word x as $|x|$. Note that after removing one letter, the indices of other letters don't change. For example, if $t = \text{"nastya"}$ and $a = [4, 1, 5, 3, 2, 6]$ then removals make the following sequence of words $\text{"nastya"} \rightarrow \text{"nastya"} \rightarrow \text{"nastya"} \rightarrow \text{"nastya"} \rightarrow \text{"nastya"} \rightarrow \text{"nastya"} \rightarrow \text{"nastya"}$.

Sergey knows this permutation. His goal is to stop his sister at some point and continue removing by himself to get the word p . Since Nastya likes this activity, Sergey wants to stop her as late as possible. Your task is to determine, how many letters Nastya can remove before she will be stopped by Sergey.

It is guaranteed that the word p can be obtained by removing the letters from word t .

Input

The first and second lines of the input contain the words t and p , respectively. Words are composed of lowercase letters of the Latin alphabet ($1 \leq |p| < |t| \leq 200\,000$). It is guaranteed that the word p can be obtained by removing the letters from word t .

Next line contains a permutation $a_1, a_2, \dots, a_{|t|}$ of letter indices that specifies the order in which Nastya removes letters of t ($1 \leq a_i \leq |t|$, all a_i are distinct).

Output

Print a single integer number, the maximum number of letters that Nastya can remove.

Examples

input	Copy
ababcba abb 5 3 4 1 7 6 2	
output	Copy
3	

input	Copy
bbbabb bb 1 6 3 4 2 5	
output	Copy
4	

Note

In the first sample test sequence of removing made by Nastya looks like this:

$\text{"ababcba"} \rightarrow \text{"ababeba"} \rightarrow \text{"ababebea"} \rightarrow \text{"ababebea"}$

Nastya can not continue, because it is impossible to get word "abb" from word "ababebea" .

So, Nastya will remove only three letters.

→ **About Time Scaling** ▾

This contest uses time limits scaling policy (depending on a programming language). The system automatically adjusts time limits by the following multipliers for some languages. Despite scaling (adjustment), the time limit cannot be more than 30 seconds. Read the details by the [link](#).

→ **Virtual participation** ▾

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
